

## Active Server

**Pages (ASP)** is a server-side scripting environment that you can use to create and run dynamic, interactive Web server applications. With ASP, you can combine HTML pages, script commands, and COM

components to create interactive Web pages or powerful Web-based applications, which are easy to develop and modify. You can:

- Use dynamic content to produce web pages that are customized for each user on the fly, based upon their actions or requests. For example, pages in an online catalogue can be queries to a database so customers always see the most current information and availability.
- Define application and session variables that can be carried across multiple pages in a Web site. This can be as simple as remembering a user's name or for applications such as online shopping to track product selections.
- Bring your existing skills and knowledge, data sources, components, and applications to the Web with languages like Visual Basic or Visual C#.
- Plus lots more ...

**Are you taking advantage of what ASP or ASP.net has to offer?**

A-Certif Ltd provide **Microsoft ASP and ASP.net training courses at several levels**, from a basic introduction class to advanced classes, and for all versions of ASP. Our experienced trainers are knowledgeable and friendly and will answer all your questions and make sure you are happy with every topic that you need to cover.

We offer **public courses** which have a standard content and take place at scheduled times. Alternatively we provide **private courses** which can be tailored to suit your particular learning requirements and delivered when and where you want them.
