

## HTML (HyperText Markup

Language) is the lingua franca for creating pages on the World Wide Web.

HyperText Markup Language

# HTML

It is a non-proprietary format based upon SGML, and can be created and processed by a wide range of tools, from simple plain text editors - you type it in from scratch - to sophisticated WYSIWYG authoring tools. You can:

- Create page layout using tables, link web pages and format text in many ways.
- Design and use forms to collect data and develop web applications.
- Create an e-mail link with default content, create page layout using frames and publish your pages to the Web.
- Use Cascading Style Sheets (CSS) to control your colours, typography, and layout schemes - separate out your content and your style.
- Plus lots more ...

**Are you taking advantage of what HTML, CSS or DHTML has to offer?**

A-Certif Ltd provide **HTML training courses at many levels**, from a basic web authoring introduction class to advanced classes. Our experienced trainers are knowledgeable and friendly and will answer all your questions and make sure you are happy with every topic that you need to cover.

We offer **public courses** which have a standard content and take place at scheduled times. Alternatively we provide **private courses** which can be tailored to suit your particular learning requirements and delivered when and where you want them.
