

Microsoft **Visual Basic® for Applications (VBA)** is a powerful development technology for rapidly customizing rich-client desktop packaged applications and integrating them with existing data and systems.

- VBA offers a sophisticated set of programming tools based on the Microsoft Visual Basic development system, the world's most popular rapid application development system, which developers can use to harness the power of packaged applications.
- VBA enables customers to buy off-the-shelf software and customize it to meet their specific business processes, rather than build solutions from scratch. This helps them save time and money, reduce risks, leverage their programming skills, and deliver precisely what users need.
- Visual Basic for Applications provides a complete integrated development environment (IDE) that features the same elements familiar to developers using Microsoft Visual Basic, including a Project Window, a Properties Window, and debugging tools. VBA also includes support for Microsoft Forms, for creating custom dialog boxes, and ActiveX® Controls, for rapidly building user interfaces.

Plus much more ... **Are you gaining the benefits that VBA has to offer?**

A-Certif Ltd provides VBA training courses at many levels from **macros to programming**, and for all versions of Microsoft Office. Our experienced trainers are knowledgeable and friendly and will answer all your questions and make sure you are happy with every topic that you need to cover.

We offer **public courses** which have a standard content and take place at scheduled times. Alternatively we provide **private courses** which can be tailored to suit your particular learning requirements and delivered when and where you want them.
