

**Visual C# .NET 2003** is the comprehensive tool set for creating XML Web services and Microsoft .NET-connected applications for Windows and the Web using the component-oriented C# development language. This robust development package offers beginning and intermediate developers with C++ or Java experience a modern language and environment for creating next-generation software.

- Intuitive C++-based Language - Use a language modeled on C++ syntax, immediately familiar to C++ and Java developers, as well as intuitive new language constructs that greatly simplify development tasks.
- Complete Windows-based Application Development Environment - With visual inheritance, developers can greatly simplify the creation of Windows-based applications by centralizing in parent forms the common logic and user interface for their entire solution.
- Microsoft .NET - Incorporate next-generation technology for resource management, unified types, and remoting to construct reliable, scalable solutions by using a unified type system and data from applications written in any of the more than 20 languages that support .NET.

Plus much more ... **Are you gaining the benefits that Visual C# .Net has to offer?**

A-Certif Ltd provides Visual C# .Net training courses at many levels from **programming introduction to advanced application development**, and for all versions of Visual C# .Net. Our experienced trainers are knowledgeable and friendly and will answer all your questions and make sure you are happy with every topic that you need to cover.

We offer **public courses** which have a standard content and take place at scheduled times. Alternatively we provide **private courses** which can be tailored to suit your particular learning requirements and delivered when and where you want them.
